Education

Dwarkadas J. Sanghvi College of Engineering, Mumbai

B.Tech in Computer Science (Data Science), Honors in Computational Finance

2023 – Present

CGPA: 9.56

Experience

Onpoint Insights

June 2026 - Present

Data and AI Intern

- Developed real-time Power BI dashboards for live machine monitoring, tracking operational KPIs, integrating streaming data with Microsoft Fabric and implementing anomaly-based alerting using Activator.
- Built an end-to-end real-time data pipeline using Python, Microsoft Eventstream, Lakehouse, and Eventhouse for data ingestion, processing, transformation, and analytics.
- Analyzed historical machine data and developed synthetic real-time data generation workflows to simulate live industrial sensor streams for monitoring and dashboard development.

Cloud Scale® Inc

July 2025 - Oct 2025

Intern

- Designed end-to-end NLP pipelines for entity extraction from unstructured documents.
- Built a responsive React-based platform with explainable AI and multi-format I/O support.
- Developed HLD diagrams and UX prototypes incorporating Zero Trust, RBAC, and multi-tenancy.

Projects

Dexora - Real-Time ASL Gesture Recognition and Interactive Learning System

GitHub

Tech Stack: Python, OpenCV, MediaPipe, NumPy, Machine Learning

- A real-time CV application to detect hand landmarks and recognize ASL gestures through a trained ML classifier.
- Implemented prediction smoothing, gesture handling, and multi-hand detection to improve recognition stability and enable natural real-time interaction.

Retail Sales Forecasting using LSTM

GitHub

Tech Stack: Python, PyTorch, Scikit-learn, Optuna

- Developed an LSTM-based deep learning model to forecast next-day retail sales from 30-day historical sequences.
- Performed feature engineering, preprocessing, sequence generation, and multi-store train/validation/test splitting.
- Applied Optuna hyperparameter optimization and evaluated model performance using relevant metrics.

FinSight

GitHub

Tech Stack: React, FastAPI, Python, LangChain, Ollama

- Built an AI-powered financial KPI dashboard for risk insights and preventive analysis.
- An Agentic AI pipeline for data understanding and analysis, relevant information extraction and KPI calculations.

Research

Estimation of Star Formation Rate using Transformer-Based Models

Aug 2024 - Aug 2026

Presented at ICACECS 2026

Designed and implemented a transformer-based model to predict star formation rates from astronomical datasets, enabling scalable analysis of large sky surveys.

Skills

Data Science: Pandas, NumPy, Matplotlib, Seaborn, NLP, Scikit-learn, OpenCV, PyTorch

BI & Analytics: Excel, Power BI

Web: HTML, CSS, JavaScript, React

Cloud & Data Platforms: Microsoft Fabric, Microsoft Azure

Languages: Python, SQL, Java, C

Tools: Jupyter, Google Colab, Git, GitHub

Achievements

- Selected for JPMC External Engagement Programme
- Finalist, Codeissance Hackathon (Thadomal Shahani Engineering College)
- Qualified 2x for National Science Olympiad (Level 1)
